

STONELOCK

The Face of Recognition

Accurate. Secure. Intuitive. Private.

Driven by the Need for Stronger Security

As security threats evolve and vulnerabilities are exposed in traditional security systems, biometric solutions are being increasingly relied upon for accurate identity verification. StoneLock solutions have answered the call to secure the most critical assets and property of over a third of the Fortune 100. Why StoneLock?

Committed to Accuracy and Security

StoneLock is committed to delivering the highest standards of security and accuracy. That is why we continuously invest in product improvements to ensure we are meeting our customers' needs for securing their most critical assets and property. Designed with advanced and proprietary near infrared (NIR) technology, our facial recognition technology ensures best-in-class performance even against the most rigorous testing and usage. Boasting an industry-leading accuracy at <0.0004% False Acceptance Rate (better than one in one quarter million), we have proven capable of distinguishing between identical twins and even multiple facial expressions from an individual user.

Passionate about Protecting Personal Identity

Biometrics have been simultaneously heralded as the future of identity verification and vilified as an enemy of personal privacy. Not with StoneLock. Even with industry-leading accuracy, our solutions protect the sanctity of user identity which has increased in importance for both government and commercial clients.

No Sensitive PII. Industry-Leading Privacy Protection

StoneLock facial recognition solution never retains any of the user's biometric data. Instead, an encrypted reference file is created, which is only usable in conjunction with StoneLock's proprietary algorithms. Therefore, a StoneLock solution contains no sensitive Personally Identifiable Information (PII) about the user.

THE STONELOCK DIFFERENCE

- Does Not Retain Sensitive PII
- 1/250,000 False Acceptance Ratio
- Easy to Install, Configure and Operate
- Scans 2000+ Points in Less than a Second
- Integrates with Most Leading Access Control Systems

Chosen by the Most Security-Conscious Applications

Over a third of the Fortune 100 and growing

AVIATION

StoneLock helps manage access to complex airport environments, ensuring only authorized personnel access tarmacs, or air traffic control towers.

DATA CENTERS

StoneLock solutions accurately verify the identities of anyone trying to access data centers, IDFs, and R&D areas, and can be a powerful part of a corporation's single sign-on process between physical security and network systems.

FINANCIAL SERVICES

Through nearly infallible identity verification, StoneLock secures access to cash drawers, vaults, and financial records. StoneLock can also be part of a keyless security solution for financial institutes looking for an alternative to keys or cards that are vulnerable to being lost or stolen.

HEALTHCARE

StoneLock solutions positively verify the identity of anyone trying to access narcotics, confidential health records, and expensive equipment, making sure they don't get into the wrong hands.

CORPORATE

Not only can StoneLock elegantly manage the access control for large employee groups entering the facility through turnstiles, it can link that verified access to the corporation's time and attendance and payroll systems.

VIP ENTRY

StoneLock solutions can be used as part of a VIP security process - transparently opening security gates or providing access to a executive access areas or private residences.

Leader in Biometric Security

StoneLock is a privately held, woman-owned, Kansas-based company with a Washington DC presence addressing the demanding security requirements in the government space. At StoneLock, we bring together unique knowledge and capabilities in the areas of biometrics and identity management. We design and manufacture superior enterprise-ready biometric access control products, configurable as standalone solutions or integrated with other leading security management systems such as Software House, Lenel, Honeywell, AMAG, and others.

Accurate. Secure. Intuitive. Private.
